## SUMMARY

Aspiring Data Analyst with hands-on experience in **SQL, Excel, Power BI, and Python**. Skilled in data cleaning, exploratory analysis, visualization, statistical analysis, and building interactive dashboards to transform raw data into actionable business insights.

## EDUCATION

|                |                                                                                |                     |
|----------------|--------------------------------------------------------------------------------|---------------------|
| 2023 – Present | <b>B.Tech in Computer Science and Engineering</b><br>IES College of Technology | <b>CGPA: 7.5/10</b> |
| 2023           | <b>Class XII (BSEB)</b>                                                        | <b>79.8%</b>        |
| 2021           | <b>Class X (GSEB)</b>                                                          | <b>84.34%</b>       |

## TECHNICAL SKILLS

|               |                                                                      |
|---------------|----------------------------------------------------------------------|
| Programming   | Python, SQL                                                          |
| Libraries     | Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn                     |
| Data Analysis | Data Cleaning, Exploratory Data Analysis (EDA), Statistical Analysis |
| Visualization | Power BI, Microsoft Excel                                            |
| Tools         | Jupyter Notebook, VS Code, Streamlit                                 |

## PROJECTS

### FinShield UPI Fraud Transaction Analysis GitHub

Sep 2026

- Analyzed **50,000 UPI transactions** using **Python, SQL, and Power BI**, identifying **2,794 fraudulent transactions** with a **5.59% fraud rate**.
- Performed **data cleaning and EDA in Python** to analyze transaction behavior, risk scores, device types, transaction channels, location changes, and time-based fraud patterns.
- Identified higher observed fraud rates for **Web transactions (9.13%)** and **Collect Request transactions (7.40%)**, enabling focused fraud-risk monitoring.
- Found fraud rates increasing from **2.52% to 10.44%** across IP risk bands and from **2.51% to 9.53%** across device-risk bands; developed a **3-page Power BI dashboard** for fraud monitoring.

### ElectroHub E-commerce Analysis GitHub

Sep 2026

- Analyzed **65K+ orders and 15K+ customers** across 5 related tables using **Excel, SQL, Python, and Power BI**, covering sales, profit, customer, product, and delivery performance.
- Evaluated **1.6B+ sales** and **460.32M+ profit**, with a **28.29% profit margin** and **25.02K AOV** to assess overall business performance.
- Used **SQL and Python** to analyze monthly sales, category profitability, top 10 products, customer tiers, acquisition channels, repeat customers, and late deliveries.
- Built a **4-page interactive Power BI dashboard** with reusable **DAX measures and 10+ KPIs**, enabling analysis across customers, products, states, warehouses, and acquisition channels.

## CERTIFICATIONS

- Deloitte Australia – Data Analytics Job Simulation (Forage)
- Python for Data Science – NPTEL
- SQL (Basic) – HackerRank
- Power BI for Beginners – Simplilearn
- Basics of Data Analytics – Physics Wallah
